

REAL BASS IN A BOX

- Super quality multi-sample recordings.
- Programmable split point.
- Programmable key priority.
- Plays on MIDI channels 1 through 14, and in Omni Mode.

Introducing the digitally sampled bass player: MIDI BASS produces the exact sound of acoustic and electric basses, from studio recordings stored on digital memory chips. If you have a Midi keyboard or sequencer, now you can have real bass to go with it.

The most popular bass sounds of the past 25 years are available on plug-in memories for Midi Bass. Each sound is a multi-sample digital recording of the real thing. The library includes Slapped & Popped Funk Bass, Flat Picked Roundwound Jazz Bass, Fingerpicked P-Bass, Rippers, Rickenbackers, Stand-up Acoustic Bass, Bowed Bass, DX-7, Mini-Moogs, and many more.

The realism is total — Midi Bass is touch sensitive, follows pitch bends,

and even responds to Midi patch changes.

Midi Bass is the natural complement to digital drum machines and Midi sequencer/synthesizer systems. Now the entire spectrum of Real bass is at every keyboard player's command. Hear 360 Systems' new Midi Bass. At high-tech keyboard stores everywhere.
