## Performer and Roady Demonstration Kit

SOUNDSHEET  
ENCLOSED!

## ABOUT THE ROADY

The Crumar Roady is destined to become the electronic piano of the 80's. Five full octaves of pianos, vibes and a punchy bass provide the player with a pool of possibilities that include:

- Mellow vibes with variable tremolo depth and rate
- Percussion that can duplicate a mallet sound, produce the accentuation of popular electronic pianos (those classic, bell-like tones), or add that biting edge for jazz solos
- 3 distinctive piano sounds that can be mixed in any combination and can be played on either the left side, the right or across the entire keyboard
- Bass, that can be played percussively or simultaneously sustained with the vibes
- The blending of all the Roady's distinct voices in a wide range of proportions (vibes over piano, piano over bass, etc.) as well as the sparky separations possible with three discrete signal outputs.

The big surprise comes when you pick it up... the Roady only weighs 32 pounds!

The past is played out. Get your hands on the Crumar Roady today! Be sure to see this and all our other professional keyboards at your local Crumar Dealer.
