

SYNERGY on tour with Jimmy Destri and Blondie.

Anyone who knows Blondie, knows their musical style demands flexibility, expressivity and massive dynamic range. That's precisely why keyboardist/songwriter Jimmy Destri purchased a Synergy.

In Synergy, Jimmy discovered an all digital synthesizer whose arsenal of acoustic and electronic sounds were the most expressive he'd ever played. He was totally in control of programmable features including touch response of individual voices, intelligent portamento, keyboard splits that followed his hands, and a 4-track event recorder that remembers expressions, bends and overdubs. And, as his musical style changes and grows, so will his Synergy. It changes with him when he plugs in the new programmed cartridges that are offered on a continuing basis.

You don't make the cover of Keyboard unless you have credentials like Jimmy Destri. The Synergy measured up to his. Let it measure up to yours.
