

THE VOYAGER CONCEPT

The VOYAGER ONE and VOYAGER EIGHT mark the beginning of a new concept in electronic keyboards in which the instrument is viewed as two separate units—the KEYBOARD CONTROLLER and the device that actually creates the sounds.

The KEYBOARD CONTROLLER is designed for total responsiveness (pressure & velocity sensitive plus joystick) while the sound generating modules are optimized for reliability, and versatility allowing more control and portability than ever before.

PRACTICAL, POWERFUL, PRECISE

Look at the specs of the ultimate keyboard system—the VOYAGERS have them all. Each VOYAGER module serves a specific function that may be used independently or with other VOYAGERS.

For instance, VOYAGER ONE is a complete programmable mono synthesizer with sequencer that can be slaved off of your existing synthesizer or used by itself with the optional VPK3 KEYBOARD CONTROLLER.

The VOYAGER EIGHT is an eight voice pre-set programmable poly synthesizer whose programs can be edited or completely revised with a VOYAGER ONE, your home computer, or tape cassette. A VOYAGER ONE can be used as a slave for a VOYAGER EIGHT to form a 9 voice poly synthesizer also capable of being controlled by your home computer to memorize sequences, create scores, change or store programs, and more.

This means you can start with any level VOYAGER module and upgrade your system with other VOYAGER modules to create an incredibly powerful keyboard system.

SOPHISTICATED FOR THE PROGRAMMER—SIMPLE FOR THE OPERATOR

If you can use a calculator, you can control a VOYAGER. Each VOYAGER module has these common features:

- 32 program memories with tape load/dump controlled by a simple calculator type keypad.
- 32 stage program stepper allowing any sequence of programs to be accessed with a footswitch in either forward or reverse direction
- Parallel memory bank control between modules.
- Computer interface for expansion.
- Standard 19" rack mount chassis for uniform arrangement of module arrays.

So you can have almost limitless array of VOYAGER modules coupled with your keyboard and/or computer for ultimate sophistication—all under control of a calculator-type keypad.

PLANNED NON-OBSOLESCENCE

This is only the beginning. The VOYAGER series modules now in the works include a polyphonic sequencer, string unit, organ, piano, and many many others—all destined to make your VOYAGER obsolescence-proof for years to come.

Sound like a dream? Drop us a line and see what the reality of the ultimate keyboard system is all about.

*We have made it a reality . . .
Introducing the VOYAGER SERIES
from Octave-plateau.*

VPK-5
Polyphonic
Keyboard Controller
695.00

VPK-5 FEATURES:

- Poly keyboard with **Pressure & Velocity** sensing.
- XY spring loaded **joystick controller**.
- **Interfaces directly** to VOYAGER EIGHT with common **mic cable**.
- Can control multiple VOYAGER system modules simultaneously.

VOYAGER EIGHT Module
Programmable Polyphonic
Synthesizer Module
3695.00

VOYAGER EIGHT FEATURES:

All of the VOYAGER series common features, plus . . .

- **Eight voices**, each identical in configuration to the VOYAGER ONE voice.
- **Split, layer and whole** 8 keyboard mode.
- **Arpeggiator** • **Stereo/mono** outputs.
- **Program parameter trimmers** for altering program sounds.
- Programs come loaded from factory and can be edited or reloaded via VOYAGER ONE, tape cassette or external computer.
- Can **drive slave synthesizers** with left and right hand sections.
