

PUT YOURSELF INTO THE SPOTLIGHT!

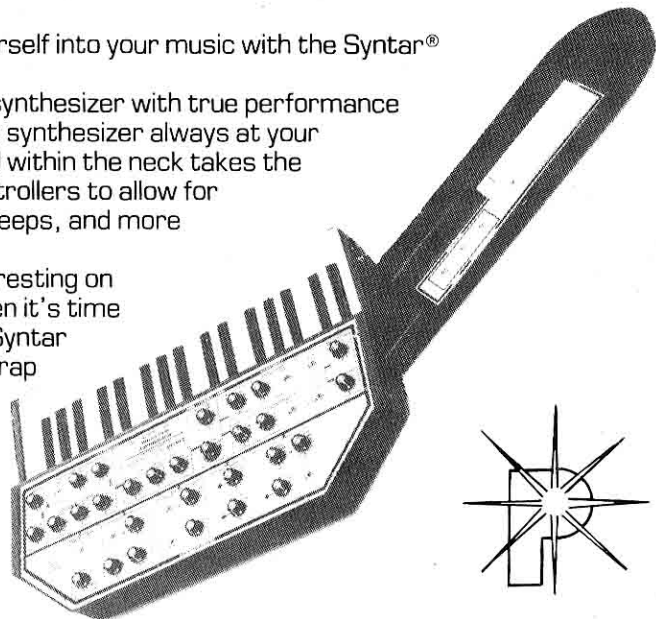

Roam the stage in freedom and truly put yourself into your music with the Syntar® Series I synthesizer.

The Syntar is the first lightweight, portable synthesizer with true performance capabilities. Besides having an incredibly versatile synthesizer always at your finger tips — the unique keyboard system housed within the neck takes the place of all joysticks, pitchwheels, and ribbon controllers to allow for multiple control of pitch bends, vibrato's, filter sweeps, and more — not found in any other available synthesizer.

The Syntar is also designed to be used while resting on a flat surface with full access to all controls. When it's time for your solo just connect the strap and go. The Syntar utilizes the patented Straplock System®. The strap won't come off unless you want it to.

With qualities like these you can't afford NOT to own a Syntar. So throw away your pitch wheels, joysticks, and ribbon controllers and express yourself with the performance Syntar!
