DX7™: TAKE IT TO THE BANK

The SynHance™ Voice Vault™ pays the dividends you're after.

SAVINGS? The Voice Vault costs less than 3 RAM cartridges, stores at least four times as much, and pays a handsome return on investment: it does what no cartridge can do.

DEPOSIT 128 of your own voices in Voice Vault RAM. Compound these with 128 SynHance voices in ROM (think of it as shared equity). Add the capability of storing performance function data. Arrange any of these voices according to your needs, in up to 64 different combinations, using and re-using voices as you wish (we call these "caches").

ACCRUE the benefits of a truly organized set of sounds: a library-composed of types of voices. Looking for that perfect guitar? Faster than a stick-up, you can withdraw your cache and have 32 from which to choose. Or, invest your cache in one of 64 of the Voice Vault's unique "songs," allowing you to easily step through your voices, in order, during a performance. Drive-Through Window? Well, almost. The Voice Vault uses the DX7's own LCD for display. No CRT or disk drive, no cheat sheets, no illegible cartridge labels.

INTEREST: Attract the kind you want from your audience or your producer. No more fumbling with cartridges, or constantly resetting your wheels and pedals. The Voice Vault makes playing your DX7 a more profitable experience. And you can take that to

THE BANK: 

Speaking of interest, if we've got yours, call us. We've got more information, including the location of your nearest SynHance dealer.
