

What a Difference a Chip Makes...

In electronic musical instruments and high performance audio equipment nationwide and around the world—the Curtis Electro-music IC “chips” make a very practical difference.

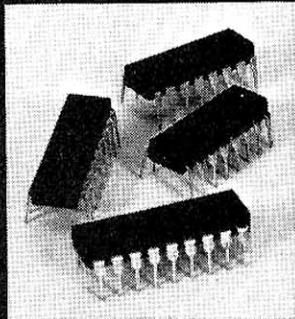

Our line of consistent Performers.

3310: Our voltage controlled envelope generator with unequalled tracking and CV rejection.

3320: VC. 4-pole filter, complete with VC resonance, connects into any filter type.

3330: Dual VCA with exponential and linear control, Class A to Class B operation. Lower noise, distortion and CV feed-through than ever!

3340: A totally self-contained exponential-linear VCO with Full temperature compensa-

tion—no more Q81's (on chip summer, and 3 output waveforms).

Custom IC design made practical.

Count on us for innovative design approaches to your application specs. And we stay with your IC in production and in interface with your product. That's how Curtis makes Custom really cost-effective.

Performance, prompt delivery, and savings!

Pin-for-pin, dollar-for-dollar, custom or off-the-shelf, we offer the package that adds up to unmatched quality. For a complete description of what a difference our chips make, call or write today!
