

Electronic Music Studios announces its most exciting new product, the SYNTHI AKS the SYNTHI with built-in Keyboard and Sequencer. Here are some of the revolutionary new features of the most advanced, compact Synthesizer available:

- * 32-note Touch Keyboard with no moving parts, contacts or springs.
- * 256-event Sequencer with digital memory which stores your melodies and permits instant replay with independent control of speed and pitch - and you can accompany your own sequences!
- * Additional features of the Keyboard and Sequencer include instant transposition, random note generation, and independent "spread" control.
- * Trigger circuit enabling your SYNTHI to accompany a guitar or other instrument automatically.
- * "Prestopatch" instant patching facility, with plug-in patches - have your very own sound stored for instant repetition!
- * New stabilized Power Supply. The SYNTHI AKS is unaffected by the most severe fluctuations in supply voltage.
- * Modified patchboard - more flexible, clearer to read, easier to use.

The SYNTHI AKS comes to you complete with three Prestopatches (instant patches for the Sequencer, for modifying an instrument, and for purely electronic effects) and a stand. It is a beautiful instrument to use.
