

Introducing The Mirage™ Digital Sampling Keyboard From Ensoniq.

At \$1695, it sounds too good to be true.

Ensoniq's new Mirage doesn't just sound great; it sounds real. You see, Mirage doesn't synthesize sounds . . . it reproduces them. Note for note; timbre for timbre; resonance for resonance. From a concert grand to a thunder clap.

Sounds real. Feels real.

The Mirage has a velocity-sensitive keyboard that lets you control dynamics and timbre, so you can put more expression into your performance. And its simple keypad lets you customize sounds at the push of a button.

The Mirage is an 8-note polyphonic keyboard, so you can play

The keypad lets you customize sounds by just pushing a button.

up to 8 notes simultaneously. With up to 16 different sounds across the keyboard. And you can split the keyboard: piano on the lower half, strings on the upper, for example.

You control 77 different parameters of sound, including filtering, envelopes, and modulation. You can record musical phrases and overdub using Mirage's built-in sequencer.

Disks: For the most authentic sound around.

The sound source of the Mirage is a 3 1/2" floppy disk in a protective plastic cassette. Each one is programmed by Ensoniq with 3 digitally recorded sounds, so you can build up a library of truly authentic sounds to play with.

Ensoniq will provide a library of diskettes with 3 different digitally recorded sounds on each.

But for the ultimate in creativity, you can sample your own sounds with the Mirage and save them on a diskette.

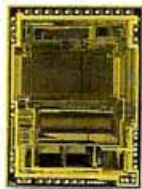

Don't forget that the keypad gives you 4 variations of each sound. And you can layer and mix sounds, too.

Available at selected dealers nationwide. Call 1-215-647-8646 for the authorized dealer nearest you.

How do we give you so much sound for so little money? Practice.

The Mirage gives you all the sounds of a \$10,000 keyboard for less than \$1700 (suggested retail price) because we've replaced hundreds of bulkier, more costly circuits with The Q Chip™—our own digital micro chip. We design and manufacture The Q Chip™ ourselves, so we always get maximum performance for minimum price.

And we've had plenty of practice at it. Our people pioneered VLSI* technology in consumer electronics, so we've already had years of success in designing and manufacturing these microelectronic marvels. Compared to us, everyone else is just getting started.

The Q Chip™: the micro chip that gives you more performance. For less money.

That's enough talk. Head for your nearest Ensoniq dealer and get a demonstration of the Mirage digital sampling keyboard. It sounds so true, you've got to hear it to believe it. And at this price, the Mirage's sound isn't the only thing that's too good to be true.

*Very Large Scale Integration. Which means lots of circuits on one tiny chip.
