

Stereo
Syntorchestra
To get directly into music.

Time of synthesizer only
is definitively up.
Today there is Farfisa Syntorchestra:
the synthesizer
which is also a musical instrument.
Farfisa Syntorchestra has, in fact,
two independent generators:
one monophonic
for the soloistic and
«synthesizer» effects,
the other one polyphonic
for the «orchestral» timbres.
Both sections are equally easy
to be used:

as Farfisa Syntorchestra
is the synthesizer which you can
finally play like an instrument.
Three octaves' keyboard, 13 preset
registers
and one very tidy series of tabs,
controls, connections...
Group instrument or third keyboard
to be added
to your electronic organ,
this is Farfisa Syntorchestra:
the new synthesizer by which
you get directly into music.
Like having a full orchestra.
