

You're looking at 4 guitars, a harp, 2 basses, a zither, 2 harpsichords and a tuba.

And 5 different kinds of piano.

Hohner's range of hard-working electronic keyboard instruments gives you more different sounds than you'd expect to hear coming from a keyboard.

Like Hohner's amazing and versatile Clavinet: you can see what sounds it makes in the caption below. And some of the best musicians around have made the Clavinet one of the most popular instruments around: Stevie Wonder and Billy Preston, just for instance.

Then there's the Hohner Combo Pianet—another one of Hohner's contributions to today's music: it's the electronic piano you use as an add-on manual or separate section. And it features stainless steel reeds that can't break or go out of tune.

We also have a keyboard bass with variable percussion. It produces an incredible range of effects, especially with a group sound. The Bass has rheostat volume and percussion controls to let you get the exact quality you're after.

And now there's the new Hohner International Piano, with more new sounds you mix in ways even we haven't thought of yet; slidebar controls make the range possible. And it's got dynamic keyboard action, vibrato decay and speed controls—so it will do whatever you want.

All our musical instruments are built with the same rugged precision you expect from Hohner. But the best thing to do is to listen to one of our instruments; drop in at your nearest music store and hear for yourself.
