

Micromoog. \$695 buys you freedom of expression.

You may have thought of owning a Moog synthesizer someday. But, you may also have thought it costs too much, or that it's hard to play.

Wrong. Especially now, with the advent of the Micromoog.

It's easy to buy. And easy to play. \$695 suggested list. And it's every inch a Moog. The choice of Chick Corea, Pat Moraz, Keith Emerson, Herbie Hancock and the rest of the best. With that patented "fat" Moog sound, and all the smooth, playable features people buy Moogs for. Plus a few new ones.

Like the built-in ribbon controller. Slide your finger up the ribbon and the pitch slides up. Slide it down, the pitch slides down. And the sound snaps back to the key you're playing the moment you release your finger. It's a simple little work of genius that lets you duplicate the blues guitar bend, the trombone slide, or the violin vibrato, not to mention your own unique expressions.

By simply sliding your finger up and down the ribbon controller, you'll create effects that no keyboardist could play before.

Pitch drift is a thing of the past with this

The stage temperature may drift, but the Micromoog never drifts out of tune. It's thermostated oscillator is continuously self heated at 130° F.

A roadie's dream, the Micromoog is surprisingly portable.

synthesizer because the Micromoog won't go out of tune. It has an oscillator control circuit that maintains itself precisely at 130° F (55° C). No matter what the temperature is on stage.

But the Moog features don't stop here.

There's "noise" control for making drums, cymbals, steam engines and thunderstorms. Fully variable wave shape to get right down to the harmonic structure of sound. Rapid filter modulation for dinner bells, church bells, tubular bells. An eight octave range. Built-in sample and hold. And a lot more you'll discover when you visit your Moog dealer.

All this brings us to the most important point—freedom of expression.

And all for \$695 suggested list.
