

Simply Moog.

Fourteen musical instruments under your control.
Without a lot of controls.

Outside, Polymoog Keyboard is simple... fourteen instruments, each unmistakably true to its name. Your choices include three distinctive pianos, harpsichord, clav, vibes, brass, two strings, two organs, plus something new to electronic keyboards—Vox Humana.

Inside, Moog technology...with separate articulators for each note to give true polyphonic expression. Choose an instrument by just pressing a button and Polymoog Keyboard redefines 71 VCF's, 71 VCA's, keyboard velocity sensitivity, the waveshape of the VCO's, individual envelopes for each key and other parameters to generate each nuance of that instrument.

Split the keyboard output and filter to adjust bass timbre. Add or subtract a chorus effect with the modulation control. And Moog's ribbon controller is a favorite, bending single notes or full chords.

Polymoog Keyboard. An array of beautiful touch sensitive instruments on the outside. Technology that gives you real polyphonic synthesis on the inside.

Play one at your Polymoog dealer.
