

sonic V A New MOOG SYNTHESIZER

designed for the
MUSIC
EDUCATOR

Only
MOOG MUSIC
offers YOU...

an ELECTRONIC MUSIC SYNTHESIZER
with all of these features:

The SONIC V is a self-contained synthesizer, housed in an attractive cabinet, complete with four-octave keyboard controller and self-powered monitor amplifier-speakers.

The SONIC V incorporates all of the basic synthesizer sound generating, modifying, and controlling functions, as well as many features usually found only on large studio installations. Ring modulation, microtonal keyboard scaling, two-note keyboard capability, and extended modulation resources contribute to the extraordinary flexibility of this instrument.

The SONIC V is ideal for use in music education, —in the classroom, in the teaching studio, and in live performance. Patchcordless operation, large, easy-to-follow signal flow panel graphics, and logical arrangement of controls result in an instrument that virtually teaches itself.

The SONIC V is designed and priced with the music educator in mind. Quality Moog engineering combines state of the art circuitry with reliable, easy-to-service construction.
