

Garbage in. Harmony out.

Introducing the Chordinator.™

Of course, you would never play garbage. But whatever you play, the Chordinator will harmonize it. Intelligently. As if your keyboards understood music theory.

The Chordinator can fatten your voicings. Freshen up stale progressions. Even generate arranging ideas. Automatically, as you play.

It instantly "teaches" your keyboards to recognize scales, modes, and the harmonic characteristics of whatever key you're playing in. So with one-touch "intelligent" pitch-shifting, the Chordinator can add harmony lines with the correct intervals tracked in any key or mode.

More amazing is its ability to harmonize entire chords and output the harmonies on different MIDI channels. And for improvising, a "wrong note filter" can erase mistakes before they ever reach your ears (or anyone else's).

The Chordinator's presets know how to revoice chords in different styles. Or allow rich, two-handed chords to be played with one hand. Or output programmed chords from single notes.

And with user-changeable presets in RAM, you'll create your own favorite approaches to programmable harmony.

So see the Chordinator at your Oberheim dealer. Because there's one last reason you'll get more out than you put in: it's only \$299.

PerFX™ MIDI Performance Effects.
\$299. From Oberheim.
