

The DPM[®] 2

Riding high on the success of its big brother, Peavey's newest entry into the synthesizer market makes its debut with a smash. Introducing the new DPM[®]2 digital phase modulation synthesizer. Now you can have the high performance of the DPM[®]3se with a surprisingly low investment. The DPM 2 was designed for the stage or studio musician who wants the power, sound, and flexibility of the SE with only a limited array of extras, allowing you to expand at your own pace as your needs demand. It contains the same 4 Megabytes of internal ROM samples as the critically acclaimed SE, offering the incredible clarity and bandwidth of 16-bit resolution. Other features include: 600 internal program locations (300 factory, 300 user), and up to 800 locations with memory card; a built-in 24-bit programmable dual effects processor; ten 32-piece programmable Drum Kit locations; up to 4-program mapping for creating layers, splits, and velocity switches; 16 voice polyphony; and 16 channel multi-timbral capability with dynamic voice allocation. Plus, like its big brother, the DPM 2 is totally software based! And if that weren't enough, the DPM 2 will also accommodate simple, affordable future upgrades and additions — a sequencer, sample RAM expansion, and true sampling capabilities, to name just a few. The DPM 3se led the way in revolutionizing modern synthesizer technology. Now the DPM 2 continues the tradition. And in this case, second best is still number one.
