

TAKE THE STUDIO HOME WITH YOU.

The Yamaha MIDI home recording system can turn your bedroom into a professional recording studio.

In about the space normally occupied by a chest of drawers.

The basic system comprises:

DX100 Synthesiser with 192 preset voices, RX17 drum machine with digitally recorded sounds, MT2X 4 track recorder that lays down

on cassette, KS10 speakers and a YMM2 MIDI junction box.

However, because the system is modular, you can expand it with the TX81Z tone generator and QX21 sequencer, while also being able to add a whole range of acoustic and traditional sounds. All x series elements are totally compatible with other Yamaha equipment.

It's like a breath of fresh air.
